Client Projects

Translator All Languages

Co-developed and published an Android application supporting translation across 100+ languages. Implemented multilingual translation features, collaborated on app architecture and UI, and managed Play Store deployment using Android (Java/Kotlin), REST APIs, and third-party translation services.

GPS Navigation App

Designed and developed an Android GPS navigation application using Java, handling the full application lifecycle, including UI/UX design, architecture, and front-end development. Integrated GPS/location services for real-time navigation and successfully deployed the app to the Google Play Store, managing APK/AAB generation, signing, versioning, and release configuration.

Meals App with Firebase Integration

Developed a mobile meals application allowing users to browse meals, view recipes, and manage favorites. Implemented Firebase for backend services, including user authentication, real-time database/storage, and cloud synchronization. Focused on a responsive UI, efficient data handling, and secure user management, ensuring scalability and reliability while following clean architecture and best development practices.
